Health and Safety Made Simple

At last! A short course to explain the fundamentals of health and safety management and the application of good health and safety management practice in business.

We will provide you or your staff with the conceptual understanding, methods, resources confidence and **INSPIRATION** to unravel the mysteries of health and safety management. The training is relevant to management and operational staff alike and an essential primer to those responsible for health and safety in your business.

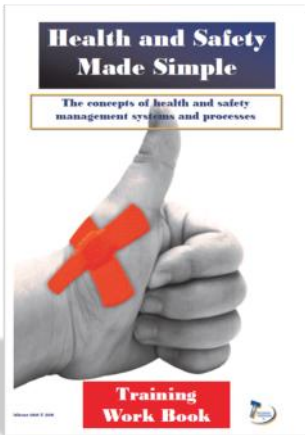

Most issues with health and safety stem from a basic lack of understanding of the simple principals: *it looks hard so it must be hard.*

ACC Thinksafe Workplace Safety Award winners, we know about successful health and safety management and we apply our own experience in this inspiring training class. We will show your staff in layman's terms how health and safety management processes can be as simple and logical as any other business process.

Opportunities exist to discuss specific individual issues and attendees are challenged to relate the coursework to their own work environment. No pre-requisite qualifications are required.

Training resources include a copy per person of the Health and Safety Made Simple Training Work Book jam packed with reference examples.

Contractors-Retailers-Manufacturing—Yes, this IS relevant to you regardless of your role!

Attendee feedback:

“Excellent Course. Highly Recommended!” RS, Auckland... “I really got lots out of it” BG, Hamilton.... “The presenter used practical experience to show us how simple h&S can be. At last health and safety makes sense to me!” GC, Tauranga.

The 3 hour training session covers the following:

- **Good management practice**
- **Statutory involvement**
- **Hazards: identification and management**
- **Events: Safety meetings, inspections, inductions, drills**
- **Accident statistics, why we gather data.**
- **Procedures: Safe Work Procedures, processes**
